Project Abstract

This website is designed to attend all your needs that is related to health Management System. Here you can fill and find the information of hospital that you need for quality health services. This website provides detail information about hospital their management system. We have included many features that needed for making site better and more productive. Here we have provided different features that runs through online platforms like online appointment with doctor, Pharmacy services and helpline contact. This website connects each client to hospital member for better health consultant. We are trying to add those features to provide better health solution and to reduce extra time of both client and hospital member staff.

Introduction

This website shows the requirement and functional process of E-health Care Management. It symbolize all the needs and requirement of client to achieve quality that is desired for website and it contain information of development to design the website. In this project we make the website which contain home section, user profile and search box at the end through which we can get information about doctors and other available health services. To create this website we used HTML5 CSS and Java script. We will make some pages of website adding different features and then we will link them. We will take references of book & other website.

Module Description:-

As administrator has all the privilege that of the guest as well as normal registered user. Along with all features an administrator has the administrator has the administrator related features such as creating new user and granting role of those new user. The role granted by administrator cannot be changed by user.

Website Requirement

While creating this website we have used different programming & scripting language :-

HTML 5 :-

It provides a mean to create structured documents by denoting structural semantic for text such as heading, paragraph, lists, links, quotes and other items.

CSS :-

It is a style sheet language used for describing the presentation of document written in html.

Java script

It is a high level and used for time compile and multiple paradigm bracket syntax creation.

Website looks & working Module.

At the top of this website we have added logo of hospital. Then at the bottom of logo we have added navigation bar. Inside navigation bar there are options with mouse hover like Home, Services, Info. center, Gallery, contact, news & events. ~~Then~~ Then after navigation bar. In home section we have linked about hospital. In services section we have added the option of appointment with doctors & hospital related searches. Likewise in info center, gallery, contact news & events. different webpages are linked to provide information. Then below Nav. bar there are some sliding images with animated services detail like welcome page, Surgery services, emergency services, heli-ambulance etc.. Then after this our story is added with featured services and informations of doctors etc. At last there is footer with reserved copyright of hospital privacy sources.

Conclusion:-

This project is to make interaction of both patient and health service provider such that both can get information about available facilities that are provided by hospital management committee and to utilize the existing technologies for running technology handled business.

References:-

While creating this website we had used different references available in internet and taught at class.
